

The grinding table produced by CHAENG is your trusted choice

The vertical mill grinding table is mainly used to support the material bed, and can also transmit the force generated by the grinding roller to the lower speed reducer, and can also transmit the torque of the reducer directly to the grinding area. The grinding table and the air duct will directly form an annular chamber, and the wind will flow out of the chamber and then enter the grinding chamber through the air ring.

There are many cast steel manufacturers for casting vertical mill grinding table in China, but there is no guarantee for the quality, so the quality of the grinding table on the market is also uneven. In the process of using some products, it is easy to break and crack when repairing and processing. The final reason is also caused by improper selection of materials. The final result is that it cannot be repaired, and wastes resources, financial resources and so on.

CHAENG is a grinding table casting manufacturer. After repeated research on these problems, it has been optimized and matched in the technology of casting grinding table to use the most advanced water glass sand for casting modeling to overcome the shortcomings of the previous structure. The base of the vertical mill grinding table can be evenly stressed, and the biting inlet angle between the grinding table and the grinding roller can be increased, and the corrosion of the non-grinding disc of the grinding disc can be effectively avoided. Using the most advanced processing equipment, it is possible to directly ensure the smooth surface of the grinding table and increase the aesthetics. Before going out of the factory, it is necessary to go through a rigorous process. It is necessary to carry out flaw detection on the force surface to ensure the internal and external quality of the grinding table. Whether it meets the standards in the industry.

When the grinding table casting manufacturer casts the grinding table, it uses ordinary carbon steel or silicon-manganese steel as the main material, and can process 20T-132T weight grinding table. The cast products can be used in cement, building materials, chemical industry, coal, electric power, metallurgy. And non-metallic minerals and other industries, in other words, the application field is more extensive, and can be customized according to the drawings provided by customers.
