

## Defect prevention and detection of slag pot

CHAENG has a relatively rich production experience of casting large cast steel slag pots, and has reached the prevention of casting defects in slag pots to ensure the quality of large steel castings.

With the development of the domestic foundry industry, the scale of the emergence is also increasing, and the capacity of the kiln is also carried out in a large-scale way. Therefore, the volume of the steel slag and the liquid volume of the pot and the enlargement of some components have become The inevitable trend.

CHAENG is also structurally adjusted as the market changes, and a large amount of cast steel slag pots are gradually increasing. However, some customers' slag pots need to be changed twice in the size of the single processing and the structural diagram, so it has become a top priority to increase efforts to develop large-scale cast steel slag pots.

The slag pots are also divided into different categories, and CHAENG is a professional cast steel slag pot, which has accumulated many years of experience in slag pot production and skills. High-precision casting equipment and professional technical team can be customized according to the drawings provided by customers, and can bring high-quality products to customers!
